

How to make a raised Veggie Garden

Online Plants NT

Supplies:

- ✚ 12x Bessa Blocks (concrete blocks) Any building supplier (or even tip site) few dollars each only
- ✚ 1 x Sheet of card board
- ✚ 75ltr of Planting soil (Garden blend) landscape supplier
- ✚ Quality herbs & Veggies
- ✚ 1x bag of Sugar cane mulch (Bunnings sell 25ltr bags)

Gather supplies; the number of Bessa blocks and the quantity of planting soil depend on how big you want your veggie patch to be.

Take into consideration a few aspects like

- Do you have the time to manage a large veggie patch?
- Do you eat a lot of herbs and veggies that you will need a good size patch?

Method:

Step 1

Find a sunny area to position your veggie garden in, the chosen site must get full Sun for most of the day.

Lay out your Bessa blocks on a flat even surface (make sure your chosen site is not prone to holding a lot of water during the wet season)

Step 2

Lay a sheet of cardboard in the veggie patch, this will help keep the weeds down as well as hold a little moisture until it breaks down

Step 3

Fill your veggie patch with planting soil or a garden blend. Plant veggies in soil sufficiently apart.

Cover planting soil with a layer of sugar cane mulch

Give your veggie a good watering.

The adjacent step by step photos of a veggie patch are of my veggie patch, it is currently jammed full of herbs and veggies, currently filled with cherry and normal sized tomatoes, egg plants, climbing beans, chives, and basil.

Happy planting!!

Remember a veggie patch is never COMPLETE. Having a veggie patch is about trying new herbs and veggies to plant, taking out plants that don't go good and trying again, it's about trying new varieties and enjoying old favourites.
